

SPAR Europe Conference Programme Launched

Technical advances, process improvements and new applications add up to an increasingly complex landscape for geospatial technologies. With the rapid rate of change that goes hand-in-hand with 3D measurement and imaging technologies, how do you keep up? SPAR Europe can help.

The highly acclaimed international conference gives you the opportunity to learn about the latest advances in 3D measurement and imaging technologies and hear about industry changes and developments first-hand from industry experts. Find out about the newest data capture systems, data fusion/classification and processing techniques and the increasing integration of key technologies that will help you work better, faster, safer and smarter.

35 of the world's foremost 3D measurement and imaging experts will share their knowledge in this year's programme, including professionals from Shell (Netherlands), DOF Subsea (UK), DPS Engineering (Ireland), Chiyoda Corporation (Japan), RICS (UK), TU Delft and Netherlands eScience Center (Netherlands) and many more. Hear case studies and lessons learned and apply these learnings to your own work.

SPAR Europe is the only platform-neutral event focused on 3D measurement and imaging solutions. For you, this means an unparalleled opportunity to compare and qualify solutions from multiple vendors-including hardware manufacturers, software developers and service providers at one time and place, and choose the solution that's right for you.
