

# Survey Solutions Welcomes Team of Experienced Professionals

Survey Solutions, one of the UK's fastest growing independent firms of Chartered Land & Engineering Surveyors, is broadening its range of services with the acquisition of a team of experienced professionals from Site Engineers, Engineering Surveyors and Project Managers who will form a dedicated division bringing the total headcount to over 100.

The new Engineering Survey team will focus on construction site services, bringing its skills and experience to specific projects – either on a short-term contract or full-time on larger schemes working alongside the site team as a permanent resource.

This strengthens Survey Solutions' expertise in site engineering and setting-out capabilities on construction projects, alongside its main focus of land surveys, measured

building surveys and underground mapping.

The team is led by Engineering Manager David Mainwaring, who comes with a broad range of experience and a huge amount of technical expertise.

James Cooper, Survey Solutions Group Managing Director said "This new development means that both existing and new clients will now have access to some additional services that they may find beneficial, including the use of high definition 3D laser scanning, land and measured building surveys, aerial drone mapping, utility tracing, underground detection and mapping of buried services, along with CCTV drainage surveys and condition reporting."

In 2016, Survey Solutions purchased local competitors East Anglian Land Surveys Ltd, and went on to successfully merge them into their main business whilst retaining all the employees.
