

# Topcon Announces Partnership with Marubeni-Komatsu

Topcon Positioning GB is partnering with Marubeni-Komatsu, the sole UK distributor of Komatsu construction and mining equipment, to provide machine control technology.

The deal means Marubeni-Komatsu customers will now have access to the full range of Topcon machine control systems, which feature technology to allow for a more efficient workflow across retrofitted systems – including excavators and dozers.

The Topcon 3D Machine Control platform has been designed to provide control capabilities, and acts as a productivity tool by simplifying construction processes and giving operators the opportunity to reduce waste and improve

safety.

Jeremy Nugent, sales director at Marubeni-Komatsu, said “Customer demand for intelligent machine control is a rapidly growing part of our business as big efficiency and productivity gains are being realised on projects up and down the country. This agreement with Topcon gives us an enhanced ability to provide our customers with the most cutting-edge job-site solutions.”

Dave Bennett, managing director at Topcon Positioning GB and Ireland, said “It’s great to be working with such a forward-thinking business to be able to provide the best possible equipment for construction and mining professionals. We’re looking forward to developing our relationship with Marubeni-Komatsu Ltd and its customers to truly increase efficiency on job sites across the UK.”
